

Project Design Phase-II

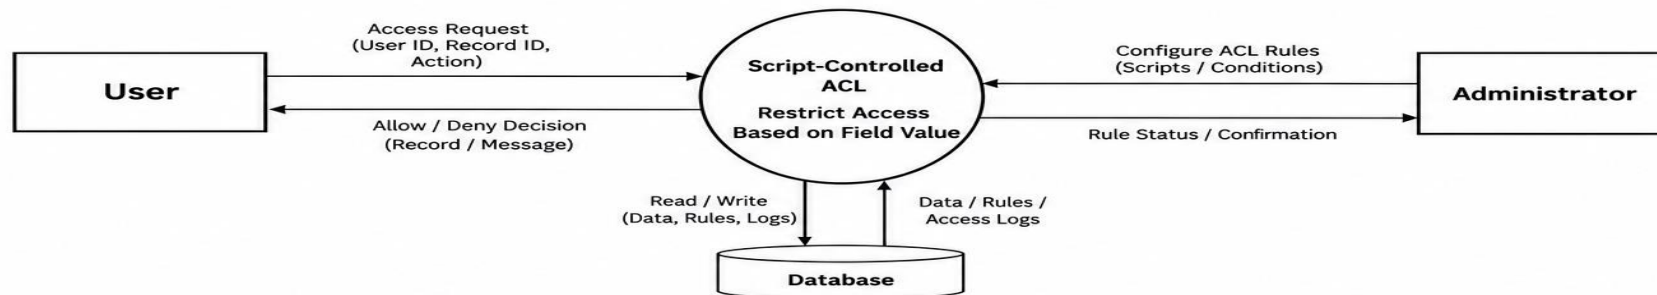

Data Flow Diagram & User Stories

Date	03 October 2026
Team ID	SWTID-2026-5622
Project Name	Script-Controlled ACL –Restricted Access Based on Field Value
Maximum Marks	4 Marks

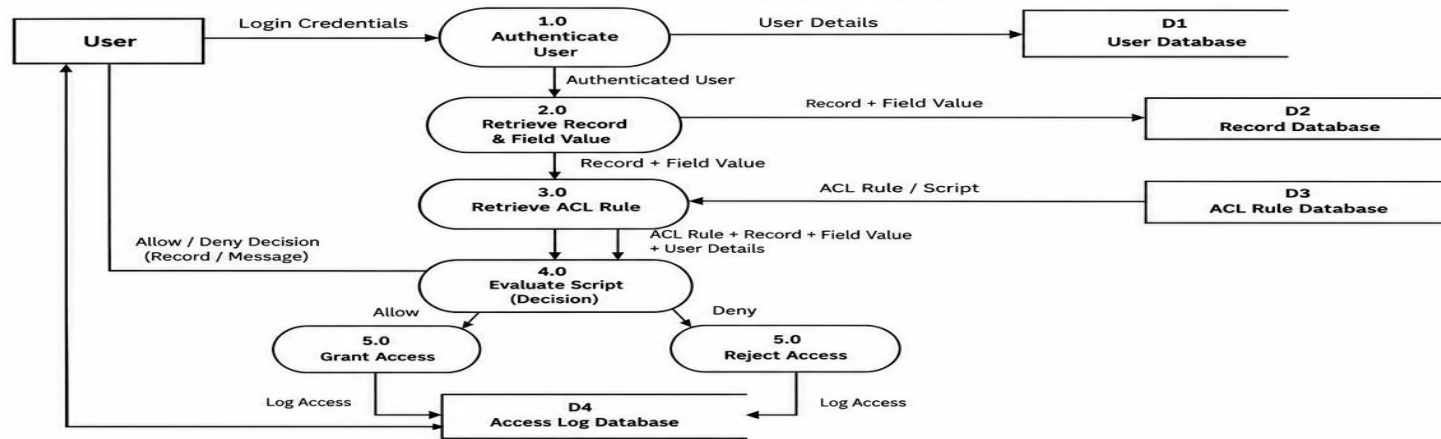

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

DFD Level 0 (Context Diagram)

DFD Level 1

User Stories

User Type	Functional Requirement / Epic	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
User	Access Control	USN-1	As a user, I can request access to a record.	System receives the user ID, record ID and requested action.	High	Sprint-1
User	Access Control	USN-2	As a user, I can access a record when the ACL condition is satisfied.	System evaluates the field value and grants access when the condition is true.	High	Sprint-1
User	Access Control	USN-3	As a user, I should be denied access when the ACL condition is not satisfied.	System denies access and displays an appropriate message.	High	Sprint-1
User	Access Control	USN-4	As a user, I can only access records allowed by the configured ACL rules.	Unauthorized records cannot be accessed.	High	Sprint-1
Administrator	ACL Management	USN-5	As an administrator, I can create an ACL rule based on a field value.	Administrator can specify field, condition and expected value.	High	Sprint-1
Administrator	ACL Management	USN-6	As an administrator, I can define a script to evaluate access.	Script can be saved and associated with the required ACL.	High	Sprint-2
Administrator	ACL Management	USN-7	As an administrator, I can modify an existing ACL rule.	Updated rule is used for subsequent access requests.	Medium	Sprint-2
Administrator	ACL Management	USN-8	As an administrator, I can disable an ACL rule.	Disabled rule is not executed during access evaluation.	Medium	Sprint-2
Administrator	Monitoring	USN-9	As an administrator, I can view access logs.	System displays user, record, decision and timestamp.	Medium	Sprint-2
System	Security	USN-10	As the system, I should prevent unauthorized access.	Requests that fail ACL evaluation are rejected.	High	Sprint-1
