

Acceptance Testing

UAT Execution & Report Submission

Date	03 October 2026
Team ID	SWTID-2026-5622
Project Name	Script-Controlled ACL –Restricted Access Based on Field Value
Maximum Marks	4 Marks

REPORT:

1. Purpose of Document

The purpose of this document is to validate that the **Script-Controlled ACL – Restricted Access Based on Field Value** system works as expected and meets the defined functional requirements.

The testing focuses on validating the access-control process in ServiceNow, including:

- Creating and accessing records with specific field values.
- Identifying the field value associated with the requested record.
- Checking the user's role and authorization.
- Executing the scripted Access Control List (ACL).
- Allowing access when the defined field-value condition is satisfied.
- Restricting access when the field-value condition is not satisfied.
- Verifying that authorized users can read permitted records.
- Verifying that unauthorized users cannot access restricted records.
- Testing restricted field access based on configured conditions.
- Validating that the ACL works without manual intervention.
- Ensuring that access decisions are applied consistently.

The UAT scenarios specifically validate **field-value-based access restriction** and ensure that ServiceNow ACL scripts correctly allow or deny access according to the configured conditions.

2. Defect Analysis

Defect analysis is performed to identify and document any issues found during testing of the **Script-Controlled ACL** functionality.

The following areas are validated during testing:

Defect / Validation Area	Expected Result	Status
User Authentication	User should successfully log in to ServiceNow.	Pass
Authorized Field Value	User should be allowed to access records when the field value matches the configured condition.	Pass
Unauthorized Field Value	Access should be denied when the field value does not satisfy the configured condition.	Pass
Role Validation	Users with the required role should receive permitted access.	Pass
Read Access	Authorized users should be able to read permitted records.	Pass
Restricted Access	Unauthorized users should not be able to access restricted records.	Pass
Field-Level Restriction	Restricted fields should not be accessible to unauthorized users.	Pass
ACL Script Execution	ACL script should correctly evaluate the field value and user authorization.	Pass
Data Security	Restricted information should not be exposed to unauthorized users.	Pass

Defect Summary:

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Total
By Design	0	0	0	0	0
Duplicate	0	0	0	0	0
Fixed	0	0	0	0	0
Not Reproduced	0	0	0	0	0
Skipped	0	0	0	0	0
Won't Fix	0	0	0	0	0
Total	0	0	0	0	0

Test Case Analysis

The following test cases are used to validate the **Script-Controlled ACL and field-value-based access restriction functionality**

Test Case ID	Test Case	Test Input / Scenario	Expected Result	Status
TC-01	Authorized Field Value	User accesses a record where the field value matches the user's authorized value.	Access should be granted.	Pass
TC-02	Unauthorized Field Value	User accesses a record where the field value does not match the authorized value.	Access should be denied.	Pass
TC-03	Role-Based Access	User with the required role attempts to access the record.	Access should be granted according to ACL conditions.	Pass
TC-04	Unauthorized User Access	User without the required authorization attempts to access a restricted record.	Access should be denied.	Pass
TC-05	Field-Level Restriction	User attempts to access a restricted field.	Restricted field should not be accessible.	Pass
TC-06	ACL Script Validation	Modify/check the field value and reload the record.	ACL should dynamically evaluate the updated field value.	Pass

Test Case Execution – Authorized Field Value

Enter User Credentials

Login to ServiceNow

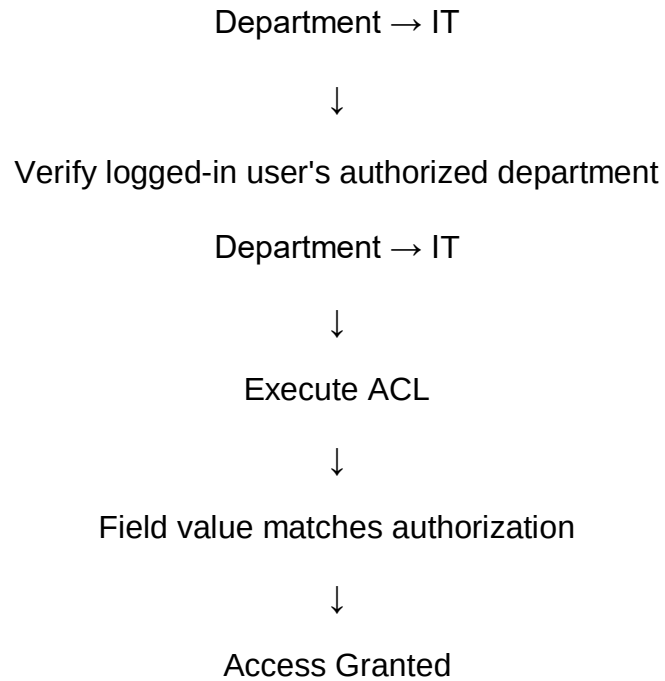

Open the required record

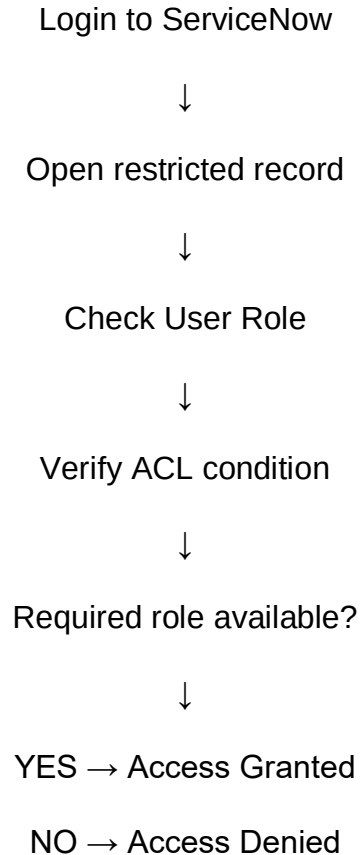

Check the configured field value

Example:

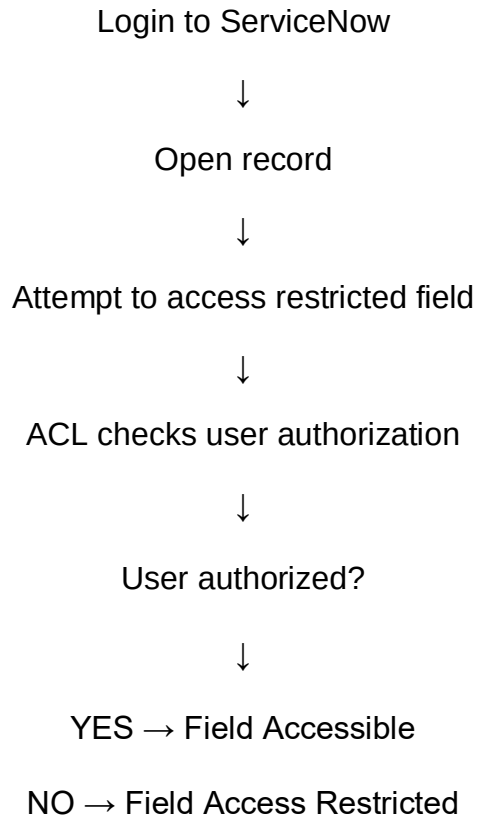

Result: PASS

Test Case Execution – Role-Based Access

Result: PASS

Test Case Execution – Field-Level Restriction

Result: PASS

Overall Test Case Result:

Test Metric	Result
Total Test Cases	6
Passed	6
Failed	0
Not Tested	0
Pass Percentage	100%
